

MATERIAL TEST DATA

TRP COMPOUND REFERENCE N°:
TRPlast® 330B Ultra High Temperature

Polymer Type: Perfluoroelastomer (FFKM)

Description

This black material has the highest thermal rate of the TRPlast® grades up to +330°C (+626°F) and has similar chemical resistance to that of PTFE but with elastomeric properties comparable to standard fluorocarbon rubbers. Developed for performance at constant elevated temperatures. This material is not suitable for high temperature water and steam applications.

Do not use any TRPlast® grade with molten alkali metals.

Service Temperatures:

-20°C (-4°F) to +330°C (+626°F) continuous.

1 Suitable, little or no effect. 2 Minor to moderate effect, not maximum resistance. 3 Moderate to severe effect - may be useful in some limited applications. 4 Unsuitable and not recommended - severe effect More detailed information available on request				

The service limit provided on this datasheet is stated as 15°C below the TR10 value. It is generally accepted within the industry that an elastomer will seal to 15°C below the TR10 figure in static conditions, providing that compression of the seal takes place at ambient conditions. TRP Polymer Solutions Ltd. Recommends that seals are evaluated in service before specification.

The properties given on this data sheet is derived from tests carried out by TRP Polymer Solutions Ltd. They should not be regarded as specifications, but only as typical properties of the material described. It is intended for use by persons having technical skills and understanding of the seal and gasket design. Since the conditions of use are outside our control, nor have we designed the product shape, we can make no warranties, express or implied and assume no liability in connection with any use of this information.

Compression Sets

Typical Compression Set Values in Air Under 25% Strain ISO 815—Tabulated

Compression Set Conditions:	Typical Values	Standard
24hrs @ 300°C (%)	13.1	ISO 815
24hrs @ 250°C (%)	7.7	ISO 815
24hrs @ 200°C (%)	9.2	ISO 815
72hrs @ 300°C (%)	16.7	ISO 815
72hrs @ 250°C (%)	10.8	ISO 815
72hrs @ 200°C (%)	13.9	ISO 815

Long Term Compression Set Values in Air Under 25% Strain ISO 815—Tabulated

Compression Set Conditions:	Typical Values	Standard
3120hrs @ 250°C (%)	34.1%	ISO 815
3120hrs @ 200°C (%)	37.7%	ISO 815

Typical Compression Set Values in Air Under 25% Strain ISO 815—Graphical

Note: The compression set at 200°C is slightly higher than 250°C because the higher temperature aids its recovery. Over longer time periods it is expected that the 200°C compression set will outlast the 250°C compression set.
